FISHMEAL & FISH OIL ITS ROLE IN SUSTAINABLE AQUACULTURE

Andrew Jackson

Symposium on Perspectives for Fishmeal and Fish Oil

Hirtshals, Denmark
August 29-30, 2016
IFFO is the global trade association representing marine ingredient producers and others in the supply chain.

IFFO RS is an independent third party audit and certification programme that assures the value chain of marine ingredients that are responsibly sourced and responsibly produced.
AQUACULTURE FEED PRODUCTION
BY GROUP

- Cyprinids
- Eels
- Crustaceans
- Marine fish
- Other Freshwater Fish
- Salmonids
- Tilapias

source: FAO and IFFO
AQUACULTURE FEED TRENDS

• Aquaculture is continuing to grow strongly
• Growth is strongest in species requiring feed
• Aquaculture is becoming more intensive so less reliance on natural productivity of the water
• The result is that demand for aquaculture feed is increasing rapidly particularly in Asia
USE OF FISHMEAL OVER THE LAST 10 YEARS

Around 70% of fishmeal is used in aquaculture.

USE OF FISH OIL OVER THE LAST 10 YEARS

Around 70% of fish oil is used in aquaculture.

FISHMEAL USAGE IN AQUACULTURE

- Cyprinids
- Eels
- Crustaceans
- Marine fish
- Other
- Salmonids
- Tilapias

Source: IFFO
As feed volumes increase inclusion % of marine ingredients decreases

MARKET TRENDS FOR SUSTAINABLE USE OF M.I. IN AQUACULTURE FEEDS

• Economical – increasing price is reducing inclusion levels in grower diets. Improving FIFO ratios

• Environmental – A growing need to show responsible fisheries management – big concern in Asia over lack of control

• Nutritional – increasing intensification, demand for high performance diets to optimise output from fixed assets, new farmed species feeds often optimised using fishmeal
INTENSIFICATION OF FARMING

• Almost all fish are carnivorous when small even species such as Grass Carp
• Require high protein and balanced amino acid profile diets to optimise performance in the hatchery
• Whilst fishmeal levels in grower diets are decreasing, fishmeal will continue to play an important role in fry diets
TUNA FARMING

Market for tuna over 6 million tonnes nearly double salmon market
Tuna highly carnivorous and require special diets with high marine ingredient inclusion – think salmon 50 years ago
CONCLUSION

There is going to be a continuing demand from sustainable aquaculture for high quality marine ingredients that are produced in a responsible manner, but increasingly the demand will be in Asia.
